AB The present invention provides nucleic acid mols. unique to
Lawsonia intracellularis. Complete genome sequences
were determined for the **L. intracellularis** chromosome and
three plasmids. The invention also provides **polypeptides**
encoded by **L. intracellularis**-specific nucleic acid
mols., and **antibodies** having specific binding affinity for the
L. intracellularis-specific **polypeptides**. The
invention further provides methods for detection of **L.**
intracellularis in a sample using nucleic acid mols.,
polypeptides, and **antibodies** of the invention. The
invention addnl. provides methods of preventing a **L.**
intracellularis infection in an animal.

AB The present invention relates i.a. to nucleic acid sequences encoding novel **Lawsonia intracellularis** proteins. It furthermore relates to DNA fragments, recombinant DNA mols. and live recombinant carriers comprising these sequences. Also it relates to host cells comprising such nucleic acid sequences, DNA fragments, recombinant DNA mols. and live recombinant carriers. Moreover, the invention relates to **proteins** encoded by these nucleotide sequences. The invention also relates to vaccines for combating **Lawsonia intracellularis** infections and methods for the preparation thereof. Finally the invention relates to diagnostic tests for the detection of **Lawsonia intracellularis** DNA, the detection of **Lawsonia intracellularis** antigens and of **antibodies** against **Lawsonia intracellularis**.

AB **Lawsonia intracellularis** has been identified recently as the etiol. agent of proliferative enteropathies, which are characterized by intestinal epithelial hyperplasia and associated moderate immune responses. This disease complex has been reported in a broad range

Searcher : Shears 571-272-2528

10/009823

of animals, prevalently in pigs, and *L. intracellularis* has been linked with ulcerative colitis in humans. *L. intracellularis* is an obligate intracellular bacterium, and the pathogenic mechanisms used to cause disease are unknown. Using in vitro-grown organisms as a source of genomic DNA, we identified a Lawsonia gene which encodes a surface antigen, LsaA (for Lawsonia surface antigen), associated with attachment to and entry into cells. The deduced amino acid sequence of this protein showed some similarity to members of a novel protein family identified in a number of other bacterial pathogens but for which roles are not fully defined. Transcription of this gene was detected by reverse transcription-PCR in *L. intracellularis* grown in vitro in IEC18 cells and in bacteria present in ileal tissue from infected animals. Immunohistochem. with specific monoclonal antibody and immunoblotting with sera from infected animals demonstrated that LsaA protein is synthesized by *L. intracellularis* during infection. Expression of this gene during infection in vitro and in vivo suggests that this surface antigen is involved during infection, and phenotypic anal. indicated a role during *L. intracellularis* attachment to and entry into intestinal epithelial cells.

AB The present invention relates generally to therapeutic compns. for the

treatment and/or prophylaxis of intestinal disease conditions in pigs or other animals caused or exacerbated by **Lawsonia intracellularis** or similar or otherwise related microorganism, such as porcine proliferative enteropathy (PPE). In particular, the present invention provides novel genes htrA, ponA, hypC, lysS, ycfW, abcl, and omp100 derived from **Lawsonia intracellularis** genomic regions A and B. These genes encode sequence homologs to lysyl-tRNA synthetase (gene lysS), transmembrane or integral membrane protein (abcl), hydrogenase maturation protein (hypC), penicillin binding protein (ponA), and periplasmic serine protease protein (htrA) resp. The invention also relates to constructing these gene expression vector to produce recombinant protein using E. coli. Methods of expressing recombinant htrA and omp100 proteins in E. coli are also provided. The invention also provides the immunogenic peptides or proteins encoded by these genes that are particularly useful as an antigen in vaccine preparation for conferring humoral immunity against **Lawsonia intracellularis** and related pathogens in animal hosts. The present invention is also directed to methods for the treatment and/or prophylaxis of such intestinal disease conditions and to diagnostic agents and procedures for detecting **Lawsonia intracellularis** or similar or otherwise related microorganisms.

AB Detection method of **Lawsonia intracellularis** was studied in formalin-fixed paraffin-embedded intestinal tissues from 5 naturally infected pigs by immunohistochem. with a monoclonal **antibody** against outer membrane **protein** of **L. intracellularis**. Warthin-Starry silver stain revealed clusters of argyrophilic, slightly curved rod-shaped organisms in the apical cytoplasm of enterocytes. Immunohistochem. staining with a **L.**

Searcher : Shears 571-272-2528

10/009823

intracellularis-specific monoclonal **antibody** confirmed the presence of the organism in the apical cytoplasm of hyperplastic enterocytes. The presence of **L. intracellularis** in the ileum of pig with proliferative enteropathy was confirmed by PCR further on the basis of amplification of 319-bp products specific for porcine **L. intracellularis** chromosomal DNA. Immunohistochem. and PCR may be a complementary method to confirm the diagnosis of **L. intracellularis** infection in pigs.

AB Strains of the obligately intracellular bacterium **Lawsonia intracellularis**, the etiol. agent of porcine proliferative enteropathy, were co-cultured in rat enterocyte cell cultures (IEC-18) and examined ultrastructurally. No regular surface arrays typical of surface or S-layers were visible on any bacterial strain, with or without Triton-X-100 detergent treatment. In sep. expts., there was no difference in the ability of **L. intracellularis** to attach and enter enterocytes with or without the presence of added bovine plasma fibronectin, or the **peptide** Arg-Gly-Ser. Interestingly, there was an increase in the invasiveness of **L. intracellularis** in the presence of the **peptide** Arg-Gly-Asp (RGD), in a dose-related manner. A reduction was observed in

the ability of **L. intracellularis** to invade enterocytes in the presence of monovalent fragments of IgG monoclonal **antibodies** to an outer surface component of **L. intracellularis**. This neutralization showed an **antibody** concentration-dependent titration effect and was not apparent with co-cultures incorporating control **antibodies**. The exact nature of ligand and cell receptor interactions for **L. intracellularis** remain to be determined

LANGUAGE: English

AB To investigate the intracellular transport mechanism of lysosomal cathepsin L in yeast cells, mouse cathepsin L was expressed in *S. cerevisiae* by placing the coding region under the control of the promoter of the yeast glyceraldehyde 3-phosphate dehydrogenase (GAPDH) gene. Immunoblotting anal. with an **antibody** specific for rat cathepsin L revealed that yeast cells carrying the cathepsin L coding sequence produced 39- and 30-kDa products, which correspond to rat procathepsin L and the single-chain form of mature cathepsin L, resp. The precursor **polypeptide** showed sensitivity toward endoglycosidase H treatment. Cell fractionation expts. demonstrated that the processed form of 30-kDa cathepsin L was colocalized to the yeast vacuole with the marker enzyme carboxypeptidase Y in a Ficoll step gradient. In the prepared vacuolar fraction, a considerable amount of cathepsin L cofractionated with the vacuolar membranes. Furthermore, phase separation expts. with Triton X-114 provided the first evidence showing that the mature form of cathepsin L **polypeptide** is strongly associated with the vacuolar membranes. Therefore, the present results suggest that the mouse cathepsin L precursor is initially synthesized as the proenzyme in yeast cells and then correctly delivered to the vacuole. During the intracellular sorting pathway, procathepsin L undergoes post-translational proteolytic processing to generate the mature enzyme. Based on these lines of evidence, it is proposed that cathepsin L is recognized by mechanisms similar to those for the intracellular sorting and processing of vacuolar **proteins** in the yeast cells.

AB WO2004033631 A UPAB: 20040514

NOVELTY - An isolated nucleic acid comprising a nucleic acid molecule of at least 10 nucleotides in length having at least 75% identity to a sequence not defined in the specification, where any of the molecule that is 10-29 nucleotides in length, under standard amplification conditions, generates an amplification product from **L**.

intracellularis nucleic acid using an appropriate second nucleic acid molecule, is new.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) a vector comprising the nucleic acid;
- (2) a host cell comprising the vector;
- (3) an isolated **polypeptide** encoded by the nucleic acid;
- (4) an article of manufacture comprising the **polypeptide**;
- (5) an **antibody** having specific binding affinity for the **polypeptide**;
- (6) a method for detecting the presence or absence of **L. intracellularis** in a biological sample;
- (7) a method of preventing infection by **L. intracellularis** in an animal;
- (8) a composition comprising a first oligonucleotide primer and a second oligonucleotide primer, where the first and second primers are each 10 to 50 nucleotides in length, and where in the presence of **L. intracellularis** nucleic acid, generate an amplification product under standard amplification conditions, but do not generate an amplification product in the presence of nucleic acid from tar organism other than **L. intracellularis**; and

- (9) an article of manufacture comprising the composition.

ACTIVITY - Antibacterial. No biological data given.

MECHANISM OF ACTION - Immunotherapy.

USE - The nucleic acid and **polypeptides** are useful for treating and preventing **L. intracellularis** infection (claimed).

AN 2003-268316 [26] WPIDS

AB WO2003016488 A UPAB: 20030428

NOVELTY - Composition (I) for separating target cells (TC) from mixture of cells, comprises linker (L), **intracellular** marker for binding to intracellular molecule (IM) of TC coupled to one end of (L), and extracellular component (EC) coupled to other end of (L), where (L) permits the marker to penetrate cell membrane (CM) and bind to IM to keep one end portion of (L) in cell and other end portion and EC outside CM.

DETAILED DESCRIPTION - A composition (I) for separating target cells (100) from a mixture of cells, comprises a linker (104), an extracellular component (106) coupled to the first end (108) of the linker, and an intracellular marker (112) for binding to an intracellular molecule of target cells coupled to the second end (110) of the linker, where the linker permits the marker to penetrate the cell membrane (102) and bind to the intracellular molecule to keep the one end portion of the linker in the cell and the other end portion and the extracellular component outside the cell membrane.

USE - (I) is useful for separating target molecules from a mixed population of cells, by contacting the cell population with (I) that includes intracellular markers, linkers and extracellular components with the markers attached to one end of linker and the extracellular components attached to the other end of the linker, where the intracellular markers permeate through the cell membrane and bind to the intracellular molecule of target cells while the extracellular components remain outside the cell, and separating the target cells on the basis of the extracellular component (claimed). (I) is useful for isolating human stem cells from umbilical cord blood, bone marrow, peripheral blood or fetal liver.

DESCRIPTION OF DRAWING(S) - The figure shows a schematic diagram of a cell separation system.

NOVELTY - A new isolated polynucleotide molecule (I) comprises:

- (a) a sequence encoding **Lawsonia intracellularis** HtrA, PonA, HypC, LysS, YcfW, ABC1 or Omp100 **protein**;
- (b) a sequence that is a substantial part of the encoding sequence of (a); or
- (c) a sequence homologous to the sequences of (a) or (b).

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

- (1) a polynucleotide molecule comprising a nucleotide sequence greater than 20 nucleotides having promoter activity and found within a fully defined sequence of 5445 bp, given in the specification, from nucleotide 2691-2890, or its complement;
- (2) a recombinant vector comprising (1);
- (3) a transformed host cell comprising the vector of (2);
- (4) a **polypeptide** produced by the transformed host cell of (3);
- (5) a genetic construct comprising a polynucleotide molecule that can be used to alter a *Lawsonia* gene, comprising:
 - (a) polynucleotide molecule comprising a sequence that is otherwise the same as a nucleotide sequence of a htrA, ponA, hypC, lysS, ycfW, abcl or omp100 gene, or its homolog, substantial portion, or mutations capable of altering the above mentioned genes; or
 - (b) a polynucleotide molecule comprising a sequence that naturally flanks in situ the ORF of the htrA, ponA, hypC, lysS, ycfW, abcl or omp100 gene, or its homolog, such that transformation of a *Lawsonia* cell with the genetic construct results in altering htrA, ponA, hypC, lysS, ycfW, abcl or omp100 gene;
 - (6) a transformed host cell comprising the genetic construct of (5);
 - (7) an isolated **polypeptide** comprising:
 - (a) a **Lawsonia intracellularis** HtrA, PonA, HypC, LysS, YcfW, ABC1 or Omp100 **protein**;
 - (b) homologs or substantial portions of (a);
 - (c) a fusion **protein** of the **polypeptide** in (a) or (b) fused to another **protein** or **polypeptide**; or
 - (d) an analog or derivative of the **polypeptide** in (a), (b) or (c);
 - (8) a substantially pure **polypeptide** comprising an epitope of HtrA, PonA, HypC, LysS, YcfW, ABC1 or Omp100 **protein** that is specifically reactive with anti-*Lawsonia* **antibodies**;
 - (9) an isolated **polypeptide** comprising the sequence encoded by (I);
 - (10) an isolated **antibody** that specifically reacts with **L. intracellularis** HtrA, PonA, HypC, LysS, YcfW, ABC1 or Omp100 **protein**;
 - (11) a live attenuated vaccine comprising the transformed cell of (6);
 - (12) a killed cell vaccine comprising transformed cells of (6) in killed form; and
 - (13) an immunogenic composition comprising (I) or the **polypeptide** of (7), in combination with a carrier.

ACTIVITY - Antibacterial. No biological data given.

AB Proliferative enteropathy is an intestinal infectious disease caused by the obligate intracellular bacterium **Lawsonia intracellularis**. Immunohistochemistry staining has superior sensitivity over hematoxylin and eosin and silver staining for detecting **L. intracellularis** in histological sections. A **L. intracellularis**-specific monoclonal antibody (MAb) produced in the UK (IG4 MAb) has been described in the literature. However, no monoclonal or polyclonal antibodies are commercially available. Therefore, the objective of this study was to produce and characterize new polyclonal and monoclonal antibodies against **L. intracellularis** that are suitable for diagnostic use. The new monoclonal (2001 MAb) and polyclonal antibodies (1999 PAb) were compared with the IG4 MAb using Western blot analysis of outer membrane proteins (OMPs) of 6 **L. intracellularis** isolates, *Bilophila wadsworthia* and *Brachyspira hyodysenteriae* and using immunohistochemistry of known positive and negative histologic samples and pure cultures of **L. intracellularis**, *B. wadsworthia*, *B. hyodysenteriae*, *Salmonella choleraesuis*, *S. typhimurium*, and *Escherichia coli* K88. Immunogold staining using 2001 MAb was performed to show the specificity of the antibody against an **L. intracellularis** surface protein. Western blot analysis showed that the 2001 MAb targeted an OMP of 77 kD, which made it different from the IG4 MAb that targeted an 18-kD OMP. The immunogold stain demonstrated the specificity of the 2001 MAb to a surface protein of **L. intracellularis**. The polyclonal antibody (1999 PAb) targeted 5 OMPs (77, 69, 54, 42, and 36 kD). Both the 2001 MAb and 1999 PAb stained known positive, but not negative, histologic samples. Both the 2001 MAb and 1999 PAb reacted with a pure culture of **L. intracellularis** but not with any other common enteric pathogens. These two new antibodies will be useful for immunodiagnosis of **L. intracellularis**.

AN 2002-557448 [59] WPIDS

AB WO 200238594 A UPAB: 20020916

NOVELTY - An isolated or recombinant immunogenic **polypeptide** (I) which comprises, mimics or cross-reacts with a B-cell or T-cell epitope of a Lawsonia spp. **polypeptide** such as fihB, fliR, ntrC, glnH, motA, motB, tlyC, ytfM or ytfN **polypeptides**, is new.

DETAILED DESCRIPTION - An isolated or recombinant immunogenic **polypeptide** (I) which comprises, mimics or cross-reacts with a B-cell or T-cell epitope of a Lawsonia spp. **polypeptide** such as fihB, fliR, ntrC, glnH, motA, motB, tlyC, ytfM or ytfN **polypeptides**, is:

(i) a **polypeptide** of Lawsonia spp. which comprises an amino acid sequence that has at least about 60% sequence identity overall to a fully defined amino acid (PS) sequence of 207 (S2), 262 (S4), 456 (S6),

137 (S8), 282 (S10), 237 (S12), 348 (S14), 602 (S16), or 1382 (S18) amino acids as given in specification;

(ii) a **polypeptide** of *Lawsonia* spp. which comprises an amino acid sequence which has at least 60% sequence identity overall to an amino acid sequence encoded by *L. intracellularis* (Li) DNA contained within a plasmid (P) having AGAL Accession Nos: NM00/16476 (plasmid pGTE1 glnH); NM00/16477 (plasmid pGTE2 flhB); NM00/16478 (plasmid pGTE3 fliR); NM00/16479 (plasmid pGTE4 motA/B); NM00/16480 (plasmid pGTE5 tlyC); NM00/16481 (plasmid pGTE6 ntrC); NM00/16482 (plasmid pGTE7 ytfM); or NM01/23286 (plasmid pGTE8 ytfN);

(iii) a **polypeptide** which comprises at least about 5 contiguous amino acids of PS;

(iv) a **polypeptide** which comprises at least about 5 contiguous amino acids of amino acid sequence of Li DNA contained within (P);

(v) a **polypeptide** which comprises an amino acid sequence encoded by nucleotide sequence of *Lawsonia* spp. having at least 60% identity overall to a fully defined nucleotide sequence (NS) of 622 (S1), 789 (S3), 1371 (S5), 412 (S7), 849 (S9), 717 (S11), 1047 (S13), 1812 (S15), or 4149 (S17) nucleotides as given in specification;

(vi) a **polypeptide** which comprises an amino acid sequence encoded by a nucleotide sequence of *Lawsonia* spp. having at least 60% sequence identity overall to nucleotide sequence of Li DNA contained within (P);

(vii) a **polypeptide** encoded by at least 15 contiguous nucleotides of NS;

(viii) a **polypeptide** encoded by at least 15 contiguous nucleotides of nucleotide sequence of Li DNA contained within (P); or

(ix) a homolog, analog or derivative of above mentioned **polypeptides** which mimic a B-cell or T-cell epitope of *Lawsonia* spp.

INDEPENDENT CLAIMS are also included for the following:

(1) a vaccine composition (II) for the prophylaxis or treatment of infection of an animal by *Lawsonia* spp. which comprises an immunogenic component that comprises (I) and one or more carriers, diluents or adjuvants suitable for veterinary or pharmaceutical use;

(2) a combination vaccine composition (III) for the prophylaxis or treatment of infection of an animal by *Lawsonia* spp., comprising:

(i) a first immunogenic component which comprises (I); and

(ii) a second immunogenic component different from first immunogenic component and comprising a Li **polypeptide** such as FlgE, hemolysin, OmpH, SodC, flhB, fliR, ntrC, glnH, motA, motB, tlyC, ytfM, or ytfN **polypeptides** and one or more carriers, diluents or adjuvants suitable for veterinary or pharmaceutical use;

(3) a vaccine vector (IV) that comprises, in an expressible form, an isolated nucleic acid molecule (V) comprising a nucleotide sequence such as:

(i) a **protein**-encoding nucleotide sequence having at least 60% sequence identity overall to a sequence of NS;

(ii) a **protein**-encoding nucleotide sequence having at least 60% identity overall to the **protein**-encoding sequence of Li DNA contained within (P);

(iii) a **protein**-encoding nucleotide sequence which comprises at least about 15 contiguous nucleotides of NS;

(iv) a **protein**-encoding nucleotide sequence which comprises at least 15 contiguous nucleotides of Li DNA contained within (P);

(v) a **protein**-encoding nucleotide sequence which hybridizes under low stringency condition to the complement of NS;

(vi) a **protein**-encoding nucleotide sequence which hybridizes under low stringency conditions to non-coding strand of Li DNA contained within (P); and

(vii) a homolog, analog or derivative of above mentioned nucleotide sequences which encodes the **polypeptide** that mimics a B-cell or T-cell epitope of Lawsonia spp.;

(4) an isolated polyclonal or monoclonal **antibody** molecule (VI) that binds specifically to Lawsonia spp. **polypeptide** of flhB, fliR, ntrC, glnH, motA, motB, tlyC, ytfM, or ytfN **polypeptide**, or homolog, analog or derivative of the above mentioned **polypeptide**;

(5) an isolated nucleic acid molecule (N) which consists of a nucleotide sequence encoding Lawsonia spp. such as flhB, fliR, ntrC, glnH, motA, motB, tlyC, ytfM, or ytfN;

(6) a probe or primer comprising any one of fully defined 50 oligonucleotide sequences as given in specification such as catattcaaggtacagcatctgatgg, ctcttttacaaccttgctcc, gctcatctaaagaacactttcc, caaggtagtatacaacttattgg, etc., or complementary nucleotide sequence to the oligonucleotide sequence;

(7) a plasmid having AGAL Accession Nos: NM00/16476 (plasmid pGTE1 glnH); NM00/16477 (plasmid pGTE2 flhB); NM00/16478 (plasmid pGTE3 fliR); NM00/16479 (plasmid pGTE4 motA/B); NM00/16480 (plasmid pGTE5 tlyC); NM00/16481 (plasmid pGTE6 ntrC); NM00/16482 (plasmid pGTE7 ytfM); or NM01/23286 (plasmid pGTE8 ytfN);

(8) a recombinant vector (VII) capable of replication in a host cell, where the vector comprises (N);

(9) a host cell (VIII) comprising (VII);

(10) identifying (M1) whether or not a porcine or avian animal has suffered from a past infection, or is currently infected, with Li or a microorganism that is immunologically cross-reactive with Li;

(11) diagnosing (M2) infection of a porcine or avian animal by Li or a microorganism that is immunologically cross-reactive with Li; and

(12) detecting (M3) Li or related microorganism in a biological sample derived from a porcine or avian animal subject.

ACTIVITY - Antibacterial.

MECHANISM OF ACTION - Vaccine. No supporting data is given.

USE - (I) is useful for identifying whether or not a porcine or avian animal has suffered from a past infection, or is currently infected, with Li or a microorganism that is immunologically cross-reactive with Li. (VI) is useful for diagnosing infection of a porcine or avian animal by Li or a microorganism that is immunologically cross-reactive with Li. (N) is useful as probes or primers for detecting Li or related microorganism in a biological sample derived from a porcine or avian animal subject (all claimed). (I) is preferably useful for vaccinating porcine animals against porcine proliferative enteropathy (PPE). (I) is also useful in vaccines for the prophylaxis and treatment of PPE in birds. (II) is useful for conferring protection against infection by other species of the genus Lawsonia or other microorganisms related to Li.

 AB **Lawsonia intracellularis** has been identified recently

as the etiological agent of proliferative enteropathies, which are characterized by intestinal epithelial hyperplasia and associated moderate immune responses. This disease complex has been reported in a broad range of animals, prevalently in pigs, and **L. intracellularis** has been linked with ulcerative colitis in humans. **L. intracellularis** is an obligate intracellular bacterium, and the pathogenic mechanisms used to cause disease are unknown. Using in vitro-grown organisms as a source of genomic DNA, we identified a *Lawsonia* gene which encodes a surface antigen, *LsaA* (for *Lawsonia* surface antigen), associated with attachment to and entry into cells. The deduced amino acid sequence of this **protein** showed some similarity to members of a novel **protein** family identified in a number of other bacterial pathogens but for which roles are not fully defined. Transcription of this gene was detected by reverse transcription-PCR in **L. intracellularis** grown in vitro in IEC18 cells and in bacteria present in ileal tissue from infected animals. Immunohistochemistry with specific monoclonal **antibody** and immunoblotting with sera from infected animals demonstrated that *LsaA* **protein** is synthesized by **L. intracellularis** during infection. Expression of this gene during infection in vitro and in vivo suggests that this surface antigen is involved during infection, and phenotypic analysis indicated a role during **L. intracellularis** attachment to and entry into intestinal epithelial cells

AB **Lawsonia intracellularis** is an obligately intracellular pathogen which is the cause of the disease complex known as proliferative enteropathy (PE) or ileitis. **L. intracellularis** is pathogenic in a broad range of animal hosts, disease being most notable in pigs. **L. intracellularis** has a tropism for immature (crypt) epithelial cells and disease is characterised by epithelial hyperplasia in infected crypts. This pathology presumably reflects expression of novel virulence factors during infection. Because methods for genetic manipulation of intracellular bacteria are rudimentary examination of their gene expression requires

application of alternative sensitive techniques which generally have involved examination of RNA. Detection of mRNA by RT-PCR (reverse transcription-PCR) is one method which we have used (alongside others) to assess expression of lhyA, a *L. intracellularis* gene which is a representative of a novel family of bacterial haemolysins. lhyA is expressed both in vitro in epithelial cells and in vivo in intestinal mucosa from infected animals. Furthermore, in addition to detection of specific RNA transcripts, **antibody** responses to recombinant LhyA were detected in sera from experimentally-infected animals, confirming **protein** expression during infection. The promoter region upstream from lhyA does not possess typical sigma factor consensus binding sites thus regulation of gene expression in this bacterium appears to differ from others. Fusion of the lhyA promoter region to a dual GFP-CAT reporter plasmid is being applied to examine expression of this gene during infection in vitro and in vivo. Reporter plasmids are being further applied in a promoter trap system generically referred to as "in vivo expression technology" (IVET) to identify genes expressed by *L. intracellularis* during infection through construction of random libraries. Through combination of RNA-based techniques, reporter systems and other analyses of gene expression we have initiated analysis of gene function in this obligately intracellular bacterium.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) a vaccine comprising, at least one carrier, diluent or adjuvant and a (I) having at least 70% sequence identity with a fully defined 251 aa sequence (1), (given in the specification), or at least 50% identity overall with aa 1-50 of (1), or their immunogenic homolog, analog or derivative that is immunologically cross-reactive with *L.*

intracellularis;

(2) vaccine vector comprising a nucleic acid sequence (II) that encodes (1);

(3) poly- or monoclonal **antibody** (Ab) that binds to *Lawsonia* hemolysin **polypeptide**, or its derivatives, that have at least 70% sequence identity with (1);

(4) an isolated nucleic acid (III) that encodes a **peptide**, oligopeptide or **polypeptide** having at least 70% sequence identity with (1), at least 50% identity overall with aa 1-50 of (1), or its homolog, analog or derivative that mimics a B- or T-cell epitope, also complements of (III);

(5) a probe or primer containing at least 15 contiguous nucleotides from a 756 bp sequence (2), reproduced, or its complement; and

(6) the plasmid pALK12 (ATCC 207195).

ACTIVITY - Antibacterial.

MECHANISM OF ACTION - Induction of a specific humoral immune response.

USE - (I) are used (i) as antigens in vaccines to prevent or treat infection by *Lawsonia*, in birds and animals, especially pigs, to raise specific **antibodies** (Ab) and to detect past or present infection. Ab are also useful in diagnosis, to detect *L. intracellularis* or immunologically cross-reactive species, also for identification of epitopes in hemolysin. Vectors that contain nucleic acid (II) that encodes (I) are also useful in genetic vaccines, and fragments of (II) are useful as primers or probes for detecting *L. intracellularis* or related microorganisms, in hybridization or amplification assays.

AN 2001-016211 [02] WPIDS

AB WO 200069905 A UPAB: 20010110

NOVELTY - A novel isolated or recombinant immunogenic **polypeptide** mimics or cross-reacts with a B-cell or T-cell epitope of a *Lawsonia* spp. OmpH **polypeptide**.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) an isolated or recombinant immunogenic **polypeptide** comprising:

(i) a **peptide**, oligopeptide or **polypeptide** which comprises an amino acid sequence having at least about 70% sequence identity overall to a fully defined 186 aa sequence (I) (given in the specification); or

(ii) a homolog, analog or derivative of (i) which mimics a B-cell or T-cell epitope of a *Lawsonia* spp. OmpH **polypeptide**;

(2) a vaccine composition for the prophylaxis or treatment of infection of an animal by *Lawsonia* spp., comprising an immunogenic component derived from an isolated or recombinant **polypeptide** having at least about 70% sequence identity overall to (I) or an immunogenic homolog, analog or derivative which is immunologically cross-reactive with *L. intracellularis*, and one or more carriers, diluents or adjuvants;

(3) a combination vaccine composition for the prophylaxis or treatment of infection of an animal by *Lawsonia* spp. comprising:

(i) a first immunogenic component comprising an isolated or recombinant **polypeptide** having at least about 70% sequence identity to (I) or an immunogenic homolog, analog, or derivative which is immunologically cross-reactive with *L. intracellularis*

;

(ii) a second immunogenic component comprising an antigenic *L. intracellularis* **peptide**, **polypeptide** or **protein**; and

(iii) one or more carriers, diluents or adjuvants suitable for veterinary or pharmaceutical use;

(4) a vaccine vector that comprises, in an expressible form, an isolated nucleic acid molecule having a nucleotide sequence that encodes (I), such that the immunogenic **polypeptide** is expressible at a level to confer immunity against *Lawsonia* spp., when administered to a porcine or avian animal;

(5) a poly- or monoclonal **antibody** molecule capable of binding specifically to a OmpH **polypeptide** or a derivative of a OmpH **polypeptide** that is derived from *Lawsonia* spp. having at least about 70% sequence identity to (I);

(6) an isolated nucleic acid molecule (NAM) comprising a sequence of nucleotides, or their complements which encode, a **peptide**, oligopeptide or **polypeptide** selected from:

(i) a **peptide**, oligopeptide or **polypeptide** which comprises an amino acid sequence which has at least about 70% sequence

identity overall to an amino acid sequence (I); and

(ii) a homolog, analog or derivative of (i) which mimics a B-cell or T-cell epitope of *Lawsonia* spp.;

(7) a method of detecting *L. intracellularis* or related microorganism in a biological sample derived from a porcine or avian animal subject comprising hybridizing one or more probes or primers derived from a fully defined 561 bp nucleotide sequence (NS) (II), or its complements to the sample and then detecting the hybridization using a detection device;

(8) a probe or primer having at least about 15 contiguous nucleotides in length derived from (II) or its complements;

(9) a plasmid designated pALK13 (ATCC No: 207196).

USE - The **polypeptides** are capable of eliciting the production of **antibodies** against *Lawsonia* spp. when administered to an avian or porcine animal (claimed). They can be used for conferring a protective immune response against *Lawsonia* spp. when administered to an avian or porcine animal (claimed). They can be used for the prophylaxis or treatment of an infection of an animal by *Lawsonia* spp. (claimed). The nucleic acids can also be used for prophylaxis or treatment of infections. The products can also be used for detection, e.g. for detecting whether or not a porcine or avian animal has suffered from a past infection or is currently infected with *L. intracellularis*. They are used particularly for porcine proliferative enteropathy (PPE) infections.

AN 2001-016210 [02] WPIDS

AB WO 200069904 A UPAB: 20030906

NOVELTY - Isolated or recombinant **polypeptide** (I) that comprises, mimics or cross-reacts with a B- or T-cell epitope of a FlgE (flagellar hook) **polypeptide** from a *Lawsonia* spp.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) a vaccine comprising, at least one carrier, diluent or adjuvant and a (I) that has at least 60% sequence identity overall with a fully defined 502 aa sequence (1), (given in the specification) or its immunogenic homolog, analog or derivative that is immunologically cross-reactive with *L. intracellularis*;

(2) a vaccine vector comprising, in expressible form, a nucleic acid sequence (II) that encodes (1);

(3) a poly- or mono-clonal **antibody** (Ab) that binds to *Lawsonia* FlgE **polypeptide**, or its derivatives, that have at least 60% sequence identity with (1);

(4) an isolated nucleic acid (III) that encodes a **peptide**, oligopeptide or **polypeptide** having at least 60% sequence

10/009823

identity with (1) or its homolog, analog or derivative that mimics a B- or T-cell epitope, also complements of (III);

(5) a probe or primer containing at least 15 contiguous nucleotides from a fully defined 1509 bp sequence (2), (given in the specification) or its complement; and

(6) a plasmid pALK11 (ATCC 207156).

ACTIVITY - Antibacterial.

MECHANISM OF ACTION - Induction of a specific humoral immune response. No data given.

USE - (I) are used as antigens in vaccines to prevent or treat infection by *Lawsonia*, in birds and animals, especially pigs, to raise specific **antibodies** (Ab) and to detect past or present infection. Ab are also useful in diagnosis, to detect *L. intracellularis* or immunologically cross-reactive species (claimed), also for identification of epitopes in FlgE. Vectors that contain nucleic acid (II) that encodes (I) are also useful in genetic vaccines, and fragments of (II) are useful as primers or probes for detecting *L. intracellularis* or related microorganisms, in hybridization or amplification assays.

AB WO 200069903 A UPAB: 20010118

NOVELTY - An isolated or recombinant immunogenic **polypeptide** (I) which comprises, mimics or cross-reacts with a B-cell or T-cell epitope of a *Lawsonia* SodC **polypeptide**, is new.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) a vaccine composition (II) for the prophylaxis or treatment of infection of an animal by *Lawsonia* comprising an immunogenic component which comprises (I), which is immunologically cross-reactive with *Lawsonia intracellularis* and one or more carriers, diluents or adjuvants suitable for veterinary or pharmaceutical use;

(2) a combination vaccine composition (III) for the prophylaxis or treatment of infection of an animal by *Lawsonia* comprising, a first immunogenic component which comprises (I), a second immunogenic component comprising an antigenic *L. intracellularis* **peptide, polypeptide or protein** and one or more carriers, diluents or adjuvants suitable for veterinary or pharmaceutical use;

(3) a vaccine vector (IV) comprising, in an expressible form, an isolated nucleic acid molecule having a nucleotide sequence that encodes an isolated or recombinant immunogenic **polypeptide** which comprises the sequence (S) such that the immunogenic **polypeptide** is expressible at a level sufficient to confer immunity against *Lawsonia*, when administered to a porcine or avian animal;

(4) a polyclonal or monoclonal **antibody** molecule (V) that is capable of binding specifically to (I);

(5) an isolated nucleic acid molecule (VI) that encodes (I), or its complement;

(6) a probe or primer (VII) having at least 15 contiguous nucleotides in length derived from the fully defined sequence of 543 base pairs (bp)

as given in the specification or its complement; and

(7) a plasmid designated pALK14 (ATCC 207155).

ACTIVITY - Antibacterial.

No biological data is given.

MECHANISM OF ACTION - Vaccine.

No biological data is given.

USE - (I) is useful for diagnosing infection of a porcine or avian animal or identifying whether or not the animal has suffered from a past infection or is currently infected with *L.*

intracellularis or a microorganism that is immunologically cross-reactive to it, by contacting whole serum, blood lymph nodes, ileum, caecum, small intestine, large intestine, feces or rectal swab derived from the animal with (V) or (I) for a time and under conditions sufficient for an antigen:antibody complex to form and detecting the complex formed. (VII) is useful for detecting *L.*

intracellularis or related microorganisms in a sample derived from the animal by hybridizing (VII) or its complement to the sample and then detecting the hybridization using a nucleic acid based hybridization or amplification reaction. (I) is useful in the preparation of a medicament for the treatment and prophylaxis of porcine proliferative enteropathy (PPE) in animals, particularly porcine or avian animals. (IV) is useful for producing a proteinaceous immunogenic component of (II) or (III) or is useful in a DNA vaccine. (II) and (III) are useful for treatment and/or prophylaxis of porcine and/or avian species against any bacterium belonging to the same serovar or serogroup as *L.*

intracellularis.

 AB Detection method of *Lawsonia intracellularis* was studied in formalin-fixed paraffin-embedded intestinal tissues from 5 naturally infected pigs by immunohistochemistry with a monoclonal antibody against outer membrane protein of *L. intracellularis*. Warthin-Starry silver stain revealed clusters of argyrophilic, slightly curved rod-shaped organisms in the apical cytoplasm

of enterocytes. Immunohistochemical staining with a **L. intracellularis**-specific monoclonal **antibody** confirmed the presence of the organism in the apical cytoplasm of hyperplastic enterocytes. The presence of **L. intracellularis** in the ileum of pig with proliferative enteropathy was confirmed by polymerase chain reaction (PCR) further on the basis of amplification of 319 base pair products specific for porcine **L. intracellularis** chromosomal DNA. Immunohistochemistry and PCR may be a complementary method to confirm the diagnosis of **L. intracellularis** infection in pigs.

ABSTRACT IS AVAILABLE IN THE ALL AND IALL FORMATS

AB Human. granulocyte-macrophage colony-stimulating factor (GM-CSF), a hemopoietic growth factor, was produced and secreted from tobacco cell suspensions. The GM-CSF cDNA was carried by a binary vector under the control of the CaMV 35S promoter and the T7 terminator. In addition, a 5'-nontranslated region from the tobacco etch virus (TEV leader sequence) was fused to the N-terminal end of the GM-CSF transgene. For ease of purification, a g-His tag was added to the 3' end of the GM-CSF cDNA. Addition of the TEV leader sequence increased **protein** production more than twofold compared to non-TEV controls. Initial batch cultivation studies indicated a maximum of 250 mu g/L extracellular and 150 mu g/L **L intracellular** GM-CSF. Western blot analysis detected multiple **peptides** with masses from 14 to 30 kDa in the extracellular medium. The plant-produced GM-CSF was biologically active and could be bound to a nickel affinity matrix, indicating that both the receptor-binding region and the g-His tag were functional. The batch production of GM-CSF was compared with the production of other recombinant **proteins** secreted by transformed tobacco cells. The recovery of secreted GM-CSF was increased by the addition of stabilizing **proteins** and by increasing salt in the growth medium to physiological levels. (C) 2000 Academic Press.

AB Fluorescent in situ hybridization targeting 16S ribosomal RNA was used for specific detection of the obligate intracellular bacterium **Lawsonia intracellularis** in enterocytes from pigs affected by proliferative enteropathy. A specific oligonucleotide probe was designed and the specificity of the probe was determined by simultaneous comparison with indirect immunofluorescence assay for detection of **L. intracellularis** in formalin-fixed tissue samples from 15 pigs affected by porcine proliferative enteropathy. We used 10 tissue samples from pigs without proliferative mucosal changes as negative controls. The results showed that the oligonucleotide probe is specific for **L. intracellularis** and that fluorescent in situ hybridization targeting ribosomal RNA is a suitable and fast method for specific detection and histological recognition of **L. intracellularis** in formalin-fixed tissue.

AN 1997-310605 [28] WPIDS
AB WO 9720050 A UPAB: 19970709

Novel vaccine for the prophylaxis or treatment of **Lawsonia intracellularis**, or related microorganism (RM), infection in animals and birds, comprises an immunogenic, non-pathogenic form of **L. intracellularis**, or a RM, or an immunogenic component, plus diluents and/or adjuvants. Also new are: (1) isolated nucleic acid molecule having 1 of the 14 sequences given in the specification, or a sequence with at least 40% similarity, which is capable of hybridising to it under conditions of low stringency, and encodes an immunogenic **peptide, polypeptide or protein of L. intracellularis**, or a RM; and (2) genetic vaccine comprising the nucleic acid molecule.

USE - The vaccines are especially administered to pigs in which

Searcher : Shears 571-272-2528

L. intracellularis, or a RM, causes porcine proliferative enteropathy (PPE). Also contemplated (not claimed) is the use of **antibodies** (Ab) specific to **L.**

intracellularis, or RM, components in immunotherapy or vaccination, or for diagnosing infection or monitoring the effects of vaccination or treatment. Natural Ab can be detected using recombinant **L. intracellularis**, or RM, **proteins**, etc..

ADVANTAGE - The vaccine is an effective alternative to treatment with antibiotics.

AB Strains of the obligately intracellular bacterium **Lawsonia intracellularis**, the etiologic agent of porcine proliferative enteropathy, were co-cultured in rat enterocyte cell cultures (IEC-18) and examined ultrastructurally. No regular surface arrays typical of surface or S-layers were visible on any bacterial strain, with or without Triton-X-100 detergent treatment. In separate experiments, there was no difference in the ability of **L. intracellularis** to attach and enter enterocytes with or without the presence of added bovine plasma fibronectin, or the **peptide** Arg-Gly-Ser. Interestingly, there was an increase in the invasiveness of **L. intracellularis** in the presence of the **peptide** Arg-Gly-Asp (RGD), in a dose-related manner. A reduction was observed in the ability of **L. intracellularis** to invade enterocytes in the presence of monovalent fragments of IgG monoclonal **antibodies** to an outer surface component of **L. intracellularis**. This neutralization showed an **antibody** concentration-dependent titration effect and was not apparent with co-cultures incorporating control **antibodies**. The exact nature of ligand and cell receptor interactions for **L. intracellularis** remain to be determined.

AB Rectal prolapse was the presenting clinical finding in a group of juvenile emus (*Dromaius novaehollandiae*). Gross findings included severely thickened and rugose distal rectal mucosae. Histologically, there were thickened villi, enterocyte hyperplasia, dilated glands filled with mucus and heterophils, and a dense infiltrate of heterophils, macrophages, lymphocytes, and plasma cells in the lamina propria. Examination of Warthin-Starry silver-stained sections revealed numerous apically located comma-shaped intracytoplasmic bacteria approximately 1 x 3 microns in size. Campylobacter-like organisms morphologically compatible with ileal symbiont *intracellularis* now known as **Lawsonia intracellularis** were seen via electron microscopy. Bacteria were further characterized by indirect immunofluorescence using monoclonal antibody specific for the 25-27-kd outer membrane protein of *L. intracellularis*.

AB PROBLEM TO BE SOLVED: To develop methods for diagnosing, preventing and treating swine proliferative intestinal diseases.
SOLUTION: This invention relates to nucleic acid sequences encoding novel **Lawsonia intracellularis** proteins. It furthermore relates to DNA fragments, recombinant DNA molecules and live recombinant carriers comprising these sequences. Also it relates to host cells comprising such nucleic acid sequences, DNA fragments, recombinant DNA molecules and live recombinant carriers. Moreover, the invention relates to **proteins** encoded with these nucleotide sequences. The invention also relates to vaccines for combating **Lawsonia**

Searcher : Shears 571-272-2528

intracellularis infections and methods for the preparation thereof. Finally, the invention relates to diagnostic tests for the detection of *Lawsonia intracellularis* DNA, the detection of *Lawsonia intracellularis* antigens and of antibodies against *Lawsonia intracellularis*.

AB A novel gene (designated 238P1B2) and its encoded protein, and variants thereof, are described wherein 238P1B2 exhibits tissue specific expression in normal adult tissue, and is aberrantly expressed in the cancers listed in Table I. Consequently, 238P1B2 provides a diagnostic, prognostic, prophylactic and/or therapeutic target for cancer. The 238P1B2 gene or fragment thereof, or its encoded protein, or variants thereof, or a fragment thereof, can be used to elicit a humoral or cellular immune response; antibodies or T cells reactive with 238P1B2 can be used in active or passive immunization.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention relates generally to therapeutic compositions for the treatment and/or prophylaxis of intestinal disease conditions in animals and birds caused or exacerbated by *Lawsonia intracellularis* or similar or otherwise related microorganism. In particular, the present invention provides a novel gene derived from *Lawsonia intracellularis* which encodes an immunogenic FlgE peptide, polypeptide or protein that is particularly useful as an antigen in vaccine preparation for conferring humoral immunity against *Lawsonia intracellularis* and related pathogens in animal hosts. The present invention is also directed to methods for the treatment and/or prophylaxis of such intestinal disease conditions and to diagnostic agents and procedures for detecting *Lawsonia intracellularis* or similar or otherwise related microorganisms.

AB Methods for protecting a T cell from cell death are described. The
methods involve contacting the T cell with an agent which augments the
bcl-X.sub.L protein level in the T cell such that it is protected from
cell death. The invention further pertains to methods for increasing the
susceptibility of a T cell to cell death, comprising contacting the T
cell with at least one agent which decreases bcl-X.sub.L protein level
in the T cell. Both in vivo and in vitro methods are described.

AB The present invention is directed to five novel, low molecular weight proteins from Actinobacillus pleuropneumoniae (APP), which are capable of inducing, or contributing to the induction of, a protective immune response in swine against APP. The present invention is further directed to polynucleotide molecules having nucleotide sequences that encode the proteins, as well as vaccines comprising the proteins or polynucleotide molecules, and methods of making and using the same.

NOVELTY - A new isolated polynucleotide molecule (I) comprises:

- (a) a sequence encoding **Lawsonia intracellularis** HtrA, PonA, HypC, LysS, YcfW, ABC1 or Omp100 protein;
- (b) a sequence that is a substantial part of the encoding sequence of (a); or
- (c) a sequence homologous to the sequences of (a) or (b).

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) a polynucleotide molecule comprising a nucleotide sequence greater than 20 nucleotides having promoter activity and found within a fully defined sequence of 5445 bp, given in the specification, from nucleotide 2691-2890, or its complement;

(2) a recombinant vector comprising (1);

(3) a transformed host cell comprising the vector of (2);

(4) a polypeptide produced by the transformed host cell of (3);

(5) a genetic construct comprising a polynucleotide molecule that can be used to alter a *Lawsonia* gene, comprising:

(a) polynucleotide molecule comprising a sequence that is otherwise the same as a nucleotide sequence of a htrA, ponA, hypC, lysS, ycfW, abc1 or omp100 gene, or its homolog, substantial portion, or mutations capable of altering the above mentioned genes; or

(b) a polynucleotide molecule comprising a sequence that naturally flanks in situ the ORF of the htrA, ponA, hypC, lysS, ycfW, abc1 or omp100 gene, or its homolog, such that transformation of a *Lawsonia* cell with the genetic construct results in altering htrA, ponA, hypC, lysS, ycfW, abc1 or omp100 gene;

(6) a transformed host cell comprising the genetic construct of (5);

(7) an isolated polypeptide comprising:

(a) a **Lawsonia intracellularis** HtrA, PonA, HypC, LysS, YcfW, ABC1 or Omp100 protein;

(b) homologs or substantial portions of (a);

(c) a fusion protein of the polypeptide in (a) or (b) fused to another protein or polypeptide; or

(d) an analog or derivative of the polypeptide in (a), (b) or (c);

(8) a substantially pure polypeptide comprising an epitope of HtrA, PonA, HypC, LysS, YcfW, ABC1 or Omp100 protein that is specifically reactive with anti-*Lawsonia* antibodies;

(9) an isolated polypeptide comprising the sequence encoded by (I);

(10) an isolated antibody that specifically reacts with **L. intracellularis** HtrA, PonA, HypC, LysS, YcfW, ABC1 or Omp100 protein;

(11) a live attenuated vaccine comprising the transformed cell of (6);

(12) a killed cell vaccine comprising transformed cells of (6) in killed form; and

(13) an immunogenic composition comprising (I) or the polypeptide of (7), in combination with a carrier.

ACTIVITY - Antibacterial. No biological data given.

MECHANISM OF ACTION - Vaccine.

USE - The methods and compositions of the present invention are useful for the prevention and diagnosis of **L. intracellularis** infections in susceptible animals, such as pigs.

AB The present invention relates generally to therapeutic compositions for the treatment and/or prophylaxis of intestinal disease conditions in animals and birds caused or exacerbated by **Lawsonia intracellularis** or similar or otherwise related microorganism. In particular, the present invention provides a novel gene derived from **Lawsonia intracellularis** which encodes an immunogenic FlgE peptide, polypeptide or protein that is particularly useful as an antigen in vaccine preparation for conferring humoral immunity against **Lawsonia intracellularis** and related pathogens in animal hosts. The present invention is also directed to methods for the treatment and/or prophylaxis of such intestinal disease conditions and to diagnostic agents and procedures for detecting **Lawsonia intracellularis** or similar or otherwise related microorganisms.

CAS INDEXING IS AVAILABLE FOR THIS PATENT.

AB The present invention relates generally to therapeutic compns. for the treatment and/or prophylaxis of intestinal disease conditions in pigs or other animals caused or exacerbated by **Lawsonia intracellularis** or similar or otherwise related microorganism, such as porcine proliferative enteropathy (PPE). In particular, the present invention provides novel genes htrA, ponA, hypC, lysS, ycfW, abcl, and omp100 derived from **Lawsonia intracellularis** genomic regions A and B. These genes encode sequence homologs to lysyl-tRNA synthetase (gene lysS), transmembrane or integral membrane protein (abcl), hydrogenase maturation protein (hypC), penicillin binding protein (ponA), and periplasmic serine protease protein (htrA) resp. The

invention also relates to constructing these gene expression vector to produce recombinant protein using E. coli. Methods of expressing recombinant htrA and omp100 proteins in E. coli are also provided. The invention also provides the immunogenic peptides or proteins encoded by these genes that are particularly useful as an antigen in vaccine preparation for conferring humoral immunity against **Lawsonia intracellularis** and related pathogens in animal hosts. The present invention is also directed to methods for the treatment and/or prophylaxis of such intestinal disease conditions and to diagnostic agents and procedures for detecting **Lawsonia intracellularis** or similar or otherwise related microorganisms.

NOVELTY - An isolated polynucleotide molecule containing a nucleotide sequence encoding HtrA, PonA, HypC, LysS, YefW, ABC1 or Omp100 protein of **Lawsonia intracellularis**, or it's fragment or homolog, is new.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) polynucleotide molecule containing more than 20 nucleotides having promotor activity and being found in nucleotides 2691-2890 of a 5445 nucleotide sequence, fully defined in the specification, or its complement;

- (2) a recombinant vector containing the polynucleotide of (1);
 (3) a transformed host cell transformed containing the novel vector;
 (4) a polypeptide produced by the cell of (3);
 (5) a gene construct containing a polynucleotide molecule which can be used for changing *Lawsonia* gene;
 (6) a transformed cell containing the construct of (5);
 (7) an isolated polypeptide produced by the cell of (6);
 (8) an attenuated live vaccine containing the transformed cell of (6);
 (9) a killed vaccine containing the cell of (6) in dead form; and
 (10) an immunogenic composition containing an immunologically effective amount of the polypeptide of (3), and a carrier.

ACTIVITY - Antibacterial.

No biological data is given.

MECHANISM OF ACTION - Vaccine.

USE - The composition is useful for the prevention of

Lawsonia intracellularis infection.

AB The present invention relates generally to therapeutic compns. for the treatment and/or prophylaxis of intestinal disease conditions in animals and birds caused or exacerbated by **Lawsonia intracellularis** or similar or otherwise related microorganism. In particular, the present invention provides a novel gene derived from **Lawsonia intracellularis** which encodes an immunogenic TylA hemolysin peptide, polypeptide or protein that is particularly useful as an antigen in vaccine preparation for conferring humoral immunity against **Lawsonia intracellularis** and related pathogens in animal hosts. The present invention is also directed to methods for the treatment and/or prophylaxis of such intestinal disease conditions and to diagnostic agents and procedures for detecting **Lawsonia intracellularis** or similar or otherwise related microorganisms.

AN 2000-320438 [28] WPIDS

AB EP 1001025 A UPAB: 20000613

NOVELTY - A substantially purified protein (I), comprising about residues 20-172, 2-215, 28-258, 20-364 or 20-369 of a 172, 215, 258, 364, or 369 amino acid sequence, respectively, all fully defined in the specification, is new. (I) is a low molecular weight Actinobacillus pleuropneumoniae (APP) protein, designated Omp20, OmpW, Opm27, OmpA1 and OmpA2.

DETAILED DESCRIPTION - INDEPENDENT CLAIMS are also included for the following:

(1) a purified polypeptide homologous to (I), or an analog or derivative of it;

(2) a fusion protein, comprising (I) joined to a carrier or fusion partner;

(3) an isolated polynucleotide homologous to a polynucleotide encoding Omp20, OmpW, Omp27, OmpA1 or OmpA2;

(4) an isolated polynucleotide encoding residues 1-19, 1-21, 1-27, 1-19 or 1-19 of the 172, 215, 258, 364 or 369 residue sequences, respectively;

(5) an isolated polynucleotide encoding (I) or the protein of (1) or (2);

(6) an oligonucleotide which can hybridize under stringent conditions to a 1018, 1188, 1171, 1922, or 1319 nucleotide sequence, all fully defined in the specification;

(7) a recombinant vector, comprising the polynucleotide of (5);

- (8) a transformed cell, comprising the vector of (7);
- (9) a vaccine against APP, comprising an antigen selected from (I), the polypeptide of (1) or (2), and the polynucleotide of (5), capable of inducing, or contributing to the induction of a protective immune response against APP in swine, and a carrier or diluent;
- (10) a method of preparing a vaccine of (9), comprising mixing the antigen and carrier;
- (11) a vaccine kit for vaccinating swine, comprising a container comprising the antigen of (9);
- (12) an isolated antibody specific for (I);
- (13) a diagnostic kit comprising (I) or the polypeptide of (1) or (2), and a secondary antibody directed against porcine antibodies, in a separate container;
- (14) a diagnostic kit, comprising the antibody of (12), and a secondary antibody which binds to different epitopes on the APP protein, or is directed against the primary antibody, in a separate container; and
- (15) a diagnostic kit, comprising a polynucleotide which can specifically hybridize or amplify an APP-specific polynucleotide molecule.

ACTIVITY - Antibacterial.

MECHANISM OF ACTION - Vaccine.

USE - The polypeptides and polynucleotides of the invention can be used as a vaccine against APP in swine. They can also be used as reagents in the diagnosis of APP infections (claimed).

AB Proliferative enteropathy (PE) is a complex of diseases of com. importance to the pig industry. The obligate intracellular bacterium *Lawsonia intracellularis* is consistently associated with PE and pure cultures of this bacterium have been used to reproduce PE in pigs. In this study *L. intracellularis* bacteria were purified directly from PE-affected tissue. DNA extracted from purified bacteria was used to construct a partial genomic library which was screened using sera from *L. intracellularis*-immunized rabbits. Two seroreactive recombinant clones were identified, one of which expressed proteins of 10 and 60 kDa. The sequence of the insert from this clone, pISI-2, revealed ORFs with sequence similarity to the groES/EL operon of *Escherichia coli*, the 50S ribosomal proteins L21 and L27 of *E. coli*, a GTP-binding protein of *Bacillus subtilis* and a possible protoporphyrinogen oxidase, HemK, of *E. coli*. Primers designed from

unique sequences from the pISI-2 insert amplified DNA from infected, but not non-infected, porcine ilea; the amplicon sequence obtained from tissue-cultured *L. intracellularis* was identical to the corresponding sequence in pISI-2, confirming the origin of the clone. The sequence of *L. intracellularis* GroEL and other GroEL sequences in the databases were used to construct a partial phylogenetic tree. Anal. of the GroEL sequence relationship suggested that *L. intracellularis* is not significantly related to other organisms whose GroEL sequences are held in the databases and supports previous data from 16S sequence analyses suggesting that *L. intracellularis* is a member of a novel group of enteric pathogens.

AB The present invention relates generally to therapeutic compns. for the treatment and/or prophylaxis of intestinal disease conditions in animals and birds caused or exacerbated by **Lawsonia intracellularis** or similar or otherwise related microorganism. The present invention also contemplates methods for the treatment and/or prophylaxis of such intestinal disease conditions and to diagnostic agents and procedures for detecting **Lawsonia intracellularis** or similar or otherwise related microorganism. The **Lawsonia intracellularis** genomic library was screened with immunoscreened with anti-**L. intracellularis** sera. Clones found to be pos. according to immunoscreening were sequenced. GroEL and GroES proteins are two immunogenic components that were identified. Examples also included immunofluorescent detection of **L. intracellularis** bacteria in pig feces, formalin-killed vaccines, and putative vaccine candidate sequences.

AB Ileal Symbiont Intracellularis (ISI) [**Lawsonia intracellularis**, see VB 66, abst. 658], the organism causing proliferative enteritis (PE) in pigs was detected in faeces by the application of polymerase chain reaction (PCR). The assay based on a 319 base pair DNA fragment was used on faecal and mucosal samples derived from pigs either affected or unaffected with PE. As few as 10³ ISI could be detected in pig faeces spiked with ISI. No amplification product was detected in the faeces of unaffected pigs but faeces of confirmed clinical cases were positive. This method offers an accurate, sensitive, easy to perform alternative to monoclonal antibody tests or histological examination post-mortem for the presence of ISI in pig herds.

AB A low-mol.-mass monomeric protein termed Fh-KTM (*Fasciola hepatica* Kunitz-type mol.) was isolated from the trematode *Fasciola hepatica*. Fh-KTM is a single polypeptide of 58 amino acids and a Mr of 6751. The complete amino acid sequence of Fh-KTM was determined and revealed significant similarity to the Kunitz-type (BPTI) family of proteinase inhibitors. Several polymorphisms were observed, suggesting that more than one Fh-KTM mol. may be expressed by this parasite. Modified proline residues were shown to occur at all 4 positions in this protein as 3-hydroxy derivs. This is the first report of 3-hydroxyproline residues in a Kunitz-type mol. Indirect immunofluorescence and immunogold labeling revealed that Fh-KTM is an abundant mol. within the parasite localized to the gut, the parenchymal tissue, and the tegument of adult *F. hepatica*. Serine protease inhibition assays revealed that Fh-KTM exhibited little or no inhibition against chymotrypsin, kallikrein, urokinase, or key serine proteases of the blood coagulation pathways. However, Fh-KTM was able to inhibit trypsin even though the P1 reactive amino acid of Fh-KTM was a leucine residue.

AB Sheep immunized with native and recombinant glutathione-S-transferase (GST) had a good antibody response to *Fasciola hepatica*. Recombinant GST was expressed in *E. coli* and used in a trial in sheep. Results confirm the efficacy of GST as immunogens against *F. hepatica* in sheep and suggest that a defined recombinant GST vaccine may be feasible. (congress abstract).

ABEX Vaccination of sheep against fascioliasis, caused by infection with the ruminant liver fluke *F. hepatica* has generally proved unsuccessful using crude parasite extracts. Sheep do not develop acquired immunity following a primary infection suggesting that a vaccine strategy aimed at using novel antigens may be necessary to control this disease. In the Authors research for a defined vaccine against *F. Hepatica*, they have tested the efficacy of fluke GST as a novel antigen in sheep. During the course of a natural infection, sheep do not develop a significant antibody response to fluke GST which comprises a mixture of several proteins of 26-26.5 kD. In several experiments sheep were immunised with native GSTs in Freund's adjuvant using various protocols and the fluke burdens within the liver determined after challenge. All vaccinated sheep showed a similar high total antibody titer to GST. The mean level of protection ranged from 6-57% under different vaccination protocols with some animals showing up to 93% protection. However, sortie groups of sheep were not protected by GST vaccination suggesting that optimal delivery and formulation of GST needs to be examined. Three cDNA sequences encoding fluke GST have been expressed in *E. coli* and have been used in a recombinant vaccine trial in sheep. Vaccination with 2 recombinant GSTs elicited a mean level of protection of 43-45%. (TOB)

AB PROBLEM TO BE SOLVED: To isolate a **Lawsonia**
intracellularis protein, and to provide a relevant method and a
material.

SOLUTION: The isolated polypeptide molecule includes a nucleotide sequence
encoding **L. intracellularis** htrA, ponA, hypC, lysS,
ycfW, abcl or omp100 protein, a substantial part in the nucleotide
sequence or its homologous sequence. Relevant polypeptides, immunogenic
compositions and methods for assay are described.
